Autism Timeline

Purpose of Study

- Conduct a thematic and content analysis of the New York Times in order to get an idea how autism is covered.
- Analyze the coverage of autism in the NYT using an ableism (ability expectations) lens.
- Infer what implications the coverage of autism in the NYT may have for the public's perception and understanding of autism.

Introduction

- Autism has gained considerable attention in the media in the past 40 years.
- Autism is seen as an important health and medical issue.
- Autism is investigated widely within academic circles.
- Newspapers play an important role in shaping peoples' perception and understanding (1,2,3).
- The NYT is a particularly influential media source, even by its own self understanding.

Methods

- Used ProQuest New York Times (University of Calgary) database as the source of data from 1973-2011.
- Used ‘autism’ as a keyword in the title as a criterion for selecting relevant articles that discussed autism (196 relevant articles found).
- Performed a content and thematic analysis using an ableism lens.
- Created a timeline that outlines the major themes that emerged using 10 year increments.

What main themes do we see covered in the NYT? What themes are not covered?

- Autism was heavily covered through a medical lens. Some of which include: search for a cause, search for a cure, treatments, results of treatments, symptoms etc.
- Biological and genetic endowment and physical environment was a major theme in the NYT, as genetics and the environment are believed to play an important role in causing autism.
- Discussions of education were focused on the rights of individuals with disabilities to get free appropriate education, however there was no mention of how many autistic individuals get a post secondary education, or any sort of education at all.
- Very few articles discussed social determinants of health such as employment/unemployment, education, social status, quality of life of people with autism although social determinants are considered important in contributing to one's health.

Discussion

We would like to acknowledge all the students that are part of the Gregor Wolbring team, also known as the “Wolb Pack” for all their help and support.

Acknowledgment
